Docket No.: 05986/100M320-US1

LISTING OF THE CLAIMS

- 1-3. (Canceled)
- 4. (Currently amended) A method of surveillance for the presence of a chemical, biological, or radiological agent, which method comprises:

assaying a sample derived from street debris materials collected from a sample domain for the presence of a chemical, biological, or radiological agent,

The method of surveillance of claim 1, further comprising the steps of (a) introducing Tetrahymena pyriformis to the sample, and (b) assaying for Bacillus anthracis[[.]];

wherein the sample domain is a route undertaken by a street sweeper machine through a city street and comprises at least one collection point from which the materials are collected from a city street in a pre-existing operation, otherwise unrelated to surveillance.

- 5-19. (Canceled)
- 20. (Currently amended) <u>A method of surveillance for the presence of a chemical, biological, or radiological agent, which method comprises:</u>

assaying a sample derived from street debris materials collected from a sample domain for the presence of a chemical, biological, or radiological agent,

wherein the sample domain is a route undertaken by a street sweeper machine through a city street and comprises at least one collection point from which the materials are collected from a city street in a pre-existing operation, otherwise unrelated to surveillance. The method of surveillance of claim 1, wherein the sample is assayed for *Bacillus thuringiensis*.

- 21-43. (Canceled)
- 44. (Currently amended) The method of claim 37 further comprising A method of detecting the presence of a chemical, biological, or radiological agent which comprises:
- (a) obtaining at least one sample from a collection of street debris that has been exposed to the environment and is collected from a street sweeper machine that follows a pre-defined,

traceable route unrelated to surveillance and continuously collects the street debris from an open environment along the pre-defined route;

- (b) assaying the sample for determining the presence of a *Bacillus* spore within [[a]] the sample comprising introducing *Tetrahymena pyriformis* to the sample, and assaying the sample for the presence of a *Bacillus* spore.;
- (c) determining a result based on the assay; and
- (d) reporting the result
- 45. (Previously presented) The method of claim 44, wherein the *Bacillus* spore is *Bacillus* anthracis.
- 46. (Previously presented) The method of claim 44, wherein the *Bacillus* spore is *Bacillus* thuringiensis.
